# About S2Journal

---

The journal management program provided by S2Journal is an innovative program that provides a variety of functions such as efficiently using various journal indicators to evaluate researchers' performance in an institution.

In particular, if you subscribe to JCR, you are provided with the function of organizing the data on the top 1%, 3%, 5%, and 10% of the annually announced JCR's Impact Factor by extracting the data in various formats such as Excel and PDF, and with other various functions that can be utilized for other journals. In addition, this is an innovative program that can also measure research performance through SJR and KCI.

## Features

- Provides integrated journal search service and detailed information of each journal. Provides basic information, publisher copyright policy information (from SHERPA / RoMEO), journal publication lead time information (from Elsevier, PubMed, DOAJ) for each journal
- Provides various journal ranking services using the journal evaluation indicator (JCR, SJR, CiteScore, KCI): Provides ranking information by year, subject field and top ranked distribution and summary service by subject field
- Provides master journal list service for each DB: SCI(E), SSCI, A&HCI, ESCI, CC(Web of Science), Scopus, Embase(Elsevier), MEDLINE(NLM), DOAJ(IS4OA), KCI(Korean Citation Index), etc.
- Stays up-to-date with regular updates
- Provides various tools such as journal of interest service, journal selection service, and journal information batch processing service
- Provides API to link journal information with the internal system of the agency to which you subscribe

## Advantages

Institutes have used only a single or a few indicators instead of various indicators of journal. Now by using the S2Journal service which enables managing various journal evaluation indicators in performance evaluation, the trouble of having to manually collect information spending lots of time and money can be avoided and access to the newest information has become easy and instant.

---

## Expected Effects of Use

- Provides directions for analysis on the achievements of researches by subject field, from various perspectives.
- Provides statistical and analytical information to help understand research trends and developments in various fields.
- Provides basic data by subject field, for establishing thesis submission strategy.
- Can be used as an evaluation tool for evaluating achievements by institution and individual.
- Can manage registration of journals efficiently.

---

### NOTE

- All elements except JCR are provided with or without JCR subscription.
  - JCR is available only if you have a license and through the system for the entire subscribed year.
-

# Integrated Journal Search Service

## Integrated Journal Search

You can quickly view details of the journal you are looking for.

You can search for journals by entering a journal name or ISSN number in the integrated search window(1).

On the Search Results screen, select the journal you want to find. Then you can see the journal details(2).

## Finding Out More about Journal

In addition to the basic bibliographies of the journals, we also provide comprehensive information on various journals such as information on copyright policy and on the journal impact indexes using various indicators.

The details provided on this screen are as follows.

\*SJR: Scimago Journal Rank(SJR) is a measure of scientific influence of scholarly journals that accounts for both the number of citations received by a journal and the importance or prestige of the journals where such citations come from.

- Journal ranking information (JIF, CiteScore, SJR) and various citation information are provided by database (WoS (5), Scopus (6), Scimago (7)), sorted and organized generally by ranks in subjects and by year. All the information provided can also be found in charts (graphs) (8).

# Journal Ranking Service

## Searching by Journal Evaluation Indicator

You can easily identify and compare the impacts of journals using the journal evaluation indicators (JCR, SJR, CiteScore, KCI). You can search using various search items such as issue year, ISSN number, journal name, and so on.

- Setting up subject areas (1) You can set specific subject areas to search for only those journals that belong to them.
- Setting upper rank distribution. You can select or type in an upper rank distribution range (2) such as 1%, 3%, 5%, or 10% to (3) to retrieve search results.

The screenshot shows the JCR Ranking search interface. The search form includes fields for Year (2016), Edition (SCIE), and Journal Title. A dropdown menu for subject areas is open, showing various categories like ECOLOGY, ECONOMICS, EDUCATION & EDUCATIONAL RESEARCH, etc. A table of search results is displayed on the right, with columns for JOURNAL, I.F., I.F.순위(%), I.F.(YEAR), and RATING. Red dashed boxes and numbered callouts (1, 2, 3) highlight the subject area selection, the upper rank distribution selection, and the search button respectively.

## Checking Search Results

The search result screen of the journal ranking service is as shown in the figure below. How to use it and provided information are as follows. Click on the journal name to go to the journal detail page.

The screenshot shows the JCR Ranking search results page. The search form includes fields for Year (2016), Edition (SCIE), and Category (ENGINEERING, ELECTRICAL & ELECTRONIC). A table of search results is displayed, with columns for YEAR, JOURNAL, ISSN, CATEGORY DESCRIPTION, I.F., I.F.순위(%), I.F.(YEAR), and RATING. Red dashed boxes and numbered callouts (1, 2, 3) highlight the search form, the search results table, and the search button respectively.

- Downloading ranking information (1) You can download the search result list in an excel file.
- Sorting search results (2) You can sort by descending or ascending order of the selected item by clicking the title of an item.
- Identifying journal information icons (3) (3) The four types of icons on the left side of the search results provide intuitive insights into what each journal is providing. The descriptions of the icons are as follows.

	<b>Detail</b>	This is displayed when detailed information about the journal is provided.
	<b>OA (Open Access Journal)</b>	This is displayed when you can freely access or utilize the papers in the journal.
	<b>Article</b>	This is displayed when there is at least one paper included in the journal.
	<b>Speed</b>	This is displayed when there is information on the required period (speed) of publishing.

**NOTE** For JCR Ranking, we don't provide ranking information download function due to the company's circumstances.

## Summary Service by Journal Evaluation Indicator by Subject

We provide a summary service by subject and by year, using the journal evaluation indicators (JCR, SJR, CiteScore, and KCI)(1). You can click the title of each item to sort it in a descending or ascending order(2).

## Beall's List Service

Provides lists of journals and their publishers, that is, the so-called Predatory Journal publishers, who are considered to have referred to SCI-listed journal sites and cleverly created a similar site, and advertise that your paper can be listed within one month or in a shorter term to collect publication fee or disappear with the paper.

Beall's List (2016.12)

Beall's List는 소위 약탈적 학술지(Predatory OA Journal)를 출판하는 것으로 여겨지는 출판사와 저널 정보를 제공하고 있습니다. 해당 저널에 투고하시고자 하는 경우 한번 더 확인 하시기 바랍니다.

# Journal Selection Service

## Entering Paper Information

The journal selection service analyzes the summary information (paper's title and abstract) entered by users and provides recommended journals in the order of relevance. The screen for entering paper information is as follows.

Journal Selection Service

Title/Keyword  
Load Balancing Based on Transform Unit Partition Information for High Efficiency Video Coding Deblocking Filter

Abstract  
In this paper, we propose a parallelization method for a High Efficiency Video Coding (HEVC) deblocking filter with transform unit (TU) split information. HEVC employs a deblocking filter to boost perceptual quality and coding efficiency. The deblocking filter was designed for data-level parallelism. In this paper, we demonstrate a method of distributing equal workloads to all cores or threads by anticipating the deblocking filter complexity based on the coding unit depth and TU split information. We determined that the average time saving of our proposed deblocking filter parallelization method has a speed-up factor that is 2x better than that of the uniformly distributed parallel deblocking filter, and 6x better than that of coding tree unit row distribution parallelism. In addition, we determined that the speed-up factor of the proposed deblocking filter parallelization method is based on the maximum value of the speed-up factor of the HEVC tool under 10.0 deblocking filter with a perceptual improvement.

3 Compare Journals

- Sorting recommended journals by search field (1) More detailed recommended journal information is provided through various search fields (by journal ranking/bibliographic DB/OA journal).
- Comparing journals of interest. You can click on ★(2) next to the journal name to register it as a journal of interest, or click the Compare Journals (3) button in the top right corner to compare all registered journals of interest.

# Journal Information Batch Processing Service

Batch processing of journal information is a function that batch-processes journal rankings and listing status of multiple papers based on journal (ISSN) and publication year.

The journal information batch processing menu can only be accessed when you log in using an administrator account. It is a service that provides the ranking information of the journals of a specific year requested by the user.

## Registering a File

1 Press the Import file(1) button on the right.

- NOTE**
- Press the Import File Download(2) button to receive a sample file to see the registration form.
  - The columns of the file you want to register must contain the items of the sample file, and the column names must be the same as those of the sample file (ID / ISSN / PubYear).
  - Up to 1,000 items are processed at a time.

2 Press the Find button to select a file you want to register.

3 Enter the name and press the Register button.

## Checking the Processed Results

Clicking on the result list takes you to the detail page for processed results.

The screenshot displays the '상세정보' (Detailed Information) page for a processed result. It includes a '등록정보' (Registration Information) section with fields for '등록 파일명' (20170823104308\_jrnIimportSample.xlsx), '등록일자' (2017-08-23), and '분서상태' (완료). A '재분석' (Reanalyze) button is highlighted with a red dashed box and a blue circle labeled '1'. Below this is a table of journal titles with columns for ISSN, YEAR, and various ranking agencies (SCI, SCIE, JCR, SJR, KCI). A red dashed box highlights the table, and a blue circle labeled '2' points to a specific row. A 'Download' button is highlighted with a red dashed box and a blue circle labeled '4'. A blue circle labeled '3' points to the table header. At the bottom, there is a note: '\* JCR 구독연도는 2010년,2011년,2012년,2013년,2014년,2015년,2016년입니다. 분석연도가 구독연도에 해당하지 않을 경우 분석 데이터가 제공되지 않습니다.'

JOURNAL TITLE	ISSN	YEAR	SCI 등재	SCIE 등재	JCR 등재	SJR 등재	KCI 등재	JCR

International Journal of Precision Engineering and M	2234-7593	2015	N	Y	Y	N	Y	ENGINEERING,

Records from 1 to 6 of 6

- If it seems that there is an error in the inspection results, you can check it again by pressing the Reanalyze button (1).
- You can see various ranking information (3) for the journal (2) of a specific year requested by the user.
- The results can be downloaded as an Excel file(4).

**NOTE** JCR does not provide analytical data if the analyzed year is not a part of the subscription year.
